

Assignment-14.5

Name:U.Sushmitha

Ht.No:2303A51705

Batch:24

Task 1 – Image Gallery Website

Create an image gallery web page.

Requirements:

- Display images in a grid layout.
- Use AI to:
 - o Optimize layout using CSS Grid.
 - o Add hover zoom or overlay effects.
 - o Ensure mobile responsiveness.

```

webpage.html > ○ webpage.html > ○ html > ○ div.gallery > ○ div.gallery-item > ○ img
1  <!-- create an image gallery web page and display images in grid layout. Optimize layout using CSS Grid and Add hover zoom or overlay effects.Ensure mobile responsiveness.-->
2  <!DOCTYPE html>
3  <html lang="en">
4  <head>
5      <meta charset="UTF-8">
6      <meta name="viewport" content="width=device-width, initial-scale=1.0">
7      <title>Image Gallery</title>
8      <style>
9          body {
10             font-family: Arial, sans-serif;
11             margin: 0;
12             padding: 0;
13             background-color: #f0f0f0;
14         }
15         .gallery {
16             display: grid;
17             grid-template-columns: repeat(auto-fit, minmax(200px, 1fr));
18             gap: 15px;
19             padding: 20px;
20         }
21         .gallery-item {
22             position: relative;
23             overflow: hidden;
24         }
25         .gallery-item img {
26             width: 100%;
27             height: auto;
28             transition: transform 0.3s ease;
29         }
30         .gallery-item:hover img {
31             transform: scale(1.1);
32         }
33         .overlay {
34             position: absolute;
35             top: 0;
36             left: 0;
37             width: 100%;
38             height: 100%;
39             background-color: rgba(0, 0, 0, 0.5);
40             color: white;
41             display: flex;
42             align-items: center;
43             justify-content: center;
44             opacity: 0;
45             transition: opacity 0.3s ease;
46         }

```

```

Task 2 – Profile Card Generator

Create a profile card web page.

Requirements:

- Display user image, name, role, and social media links.

- Use AI to:

- o Suggest modern UI colors and fonts.

- o Design the card using Flexbox.

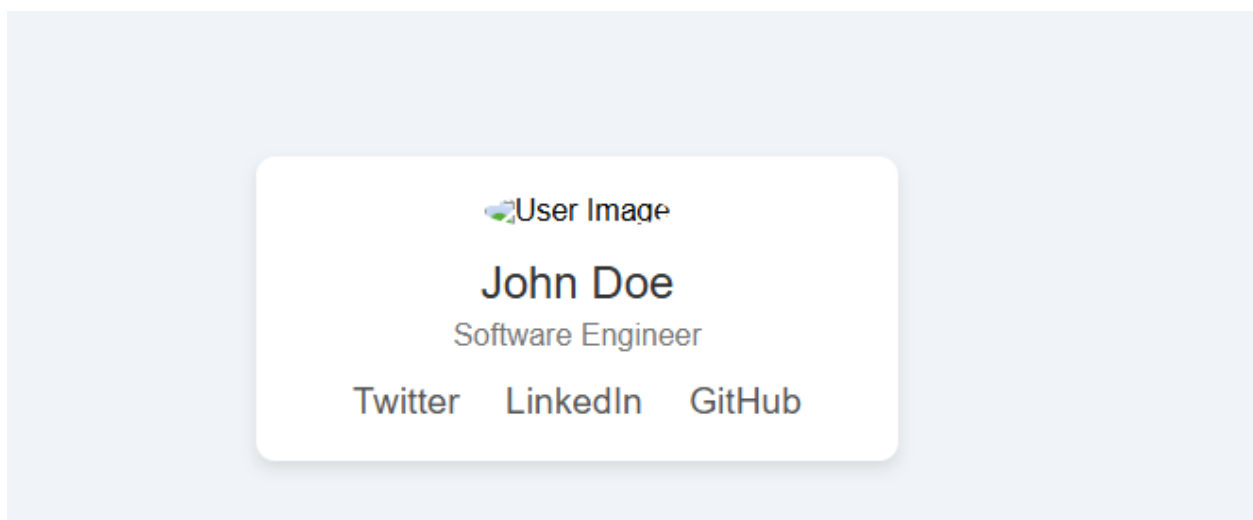

- o Add hover animation and shadow effects

```
webpage.html > ○ webpage.html > ⌕ html > ⌕ head > ⌕ style > 📄 profile-image
1  <!-- Create a profile card web page. Display user image, name, role, and social media links, Suggest modern UI colors and fonts. and Design the card using Flexbox. and Add hover animation and shadow effects -->
2  <!DOCTYPE html>
3  <html lang="en">
4  <head>
5      <meta charset="UTF-8">
6      <meta name="viewport" content="width=device-width, initial-scale=1.0">
7      <title> This attribute defines the name of a piece of document-level metadata. It should not be set if one of the attributes itemprop, http-equiv or charset is also set.
8      <style> This metadata name is associated with the value contained by the content attribute. The possible values for the name attribute are:
9          * application-name which defines the name of the application running in the web page.
10             * Note:
11                 * Browsers may use this to identify the application. It is different from the <title> element, which usually contain the application name, but may also contain information like the document name or a status.
12                 * Simple web pages shouldn't define an application-name.
13             * author which defines the name of the document's author.
14             * description which contains a short and accurate summary of the content of the page. Several browsers, like Firefox and Opera, use this as the default description of bookmarked pages.
15             * generator which contains the identifier of the software that generated the page.
16             * keywords which contains words relevant to the page's content separated by commas.
17             * referrer which controls the Referer HTTP header attached to requests sent from the document.
18         }
19     }
